

Indian Context – Skilling through DST

Presented by Ms. Soma Mitra Mukherjee, Deputy Director , BCC&I

In India, the adoption of Manufacturing 4.0 is at a nascent stage. The industrial sector is an integral part of 'Make in India'. Skilling is the most critical and complex component of manufacturing transition.

Dual System of Training (DST) in India shall provide necessary framework for industry led training and creating skilled workforce to match the skill demand in the country.

The massive demand for complementary training of Technical Subject in India indicates a mismatch between academic education and industry requirements.

BCC&I along with the project team identifies the gap between academia and industry and trying to provide an approach to bridge it using the concept of Monitoring , Learning and Evaluation process.
